Clearfix

Quickly and easily clear floated content within a container by adding a clearfix utility.

Easily clear **floats** by adding **.clearfix** to the parent element. Can also be used as a mixin.

```
<div class="clearfix">...</div>
```

[Copy](#)

```
// Mixin itself
@mixin clearfix() {
  &::after {
    display: block;
    content: "";
    clear: both;
  }
}
```

[Copy](#)

```
}  
}  
  
// Usage as a mixin  
.element {  
  @include clearfix;  
}
```

The following example shows how the clearfix can be used. Without the clearfix the wrapping div would not span around the buttons which would cause a broken layout.

Example Button floated left

Example Button floated right

```
<div class="bg-info clearfix">  
  <button type="button" class="btn btn-secondary float-left">Example Button floated  
  <button type="button" class="btn btn-secondary float-right">Example Button floated  
</div>
```

Copy
