## Bootstrap 4 Filters

Bootstrap does not have a component that allows filtering. However, we can use jQuery to filter / search for elements.

## Filter Tables

Perform a case-insensitive search for items in a table:

### Example

Type something in the input field to search the table for first names, last names or emails:

Firstname	Lastname	Email
-----------	----------	-------

John	Doe	john@example.com
Mary	Moe	mary@mail.com
July	Dooley	july@greatstuff.com
Anja	Ravendale	a_r@test.com

## jQuery

```
<script class="tagcolor" style="color:mediumblue">>
$(document).ready(function() {
  $("#myInput").on("keyup", function() {
    var value = $(this).val().toLowerCase();
    $("#myTable tr").filter(function() {
      $(this).toggle($(this).text().toLowerCase().indexOf(value) > -1)
    });
  });
});
</script class="tagcolor" style="color:mediumblue">>
```

Try it Yourself »

**Example explained:** We use jQuery to loop through each table rows to check if there are any text values that matches the value of the input field. The `toggle` method hides the row (`display:none`) that does not match the search. We use the `toLowerCase()` method to convert the text to lower case, which makes the search case insensitive (allows "john", "John", and even "JOHN" on search).

## Filter Lists

## Filter Anything

Perform a case-insensitive search for text inside a div element:

## Example

I am a paragraph.

I am a div element inside div.

I am a button

Another button

Another paragraph.
