Text alignment

Easily realign text to components with text alignment classes.

Ambitioni dedisse scripsisse iudicaretur. Cras mattis iudicium purus sit amet fermentum. Donec sed odio operae, eu vulputate felis rhoncus. Praeterea iter est quasdam res quas ex communi. At nos hinc posthac, sitientis piros Afros. Petierunt uti sibi concilium totius Galliae in diem certam indicere. Cras mattis iudicium purus sit amet fermentum.

```
<p class="text-justify">Ambitioni dedisse scripsisse iudicaretur. Cras mattis iudic
```
<div style="text-align:right">Copy</div>

For left, right, and center alignment, responsive classes are available that use the same viewport width breakpoints as the grid system.

Left aligned text on all viewport sizes.

<div style="text-align:center">Center aligned text on all viewport sizes.</div>

<div style="text-align:right">Right aligned text on all viewport sizes.</div>

Left aligned text on viewports sized SM (small) or wider.

Left aligned text on viewports sized MD (medium) or wider.

Left aligned text on viewports sized LG (large) or wider.

Left aligned text on viewports sized XL (extra-large) or wider.

<div style="text-align:right">Copy</div>

```
<p class="text-left">Left aligned text on all viewport sizes.</p>
<p class="text-center">Center aligned text on all viewport sizes.</p>
<p class="text-right">Right aligned text on all viewport sizes.</p>

<p class="text-sm-left">Left aligned text on viewports sized SM (small) or wider.</
<p class="text-md-left">Left aligned text on viewports sized MD (medium) or wider.<
<p class="text-lg-left">Left aligned text on viewports sized LG (large) or wider.</
<p class="text-xl-left">Left aligned text on viewports sized XL (extra-large) or w:
```

Text wrapping and overflow

Prevent text from wrapping with a `.text-nowrap` class.

This text should overflow the parent.

<div style="position:relative">Copy</div>

```html
<div class="text-nowrap" style="width: 8rem;">
  This text should overflow the parent.
</div>
```

For longer content, you can add a `.text-truncate` class to truncate the text with an ellipsis. **Requires `display: inline-block` or `display: block`.**

Praeterea i…

Praeterea iter est q…

<div style="position:relative">Copy</div>

```html
<!-- Block level -->
<div class="row">
  <div class="col-2 text-truncate">
    Praeterea iter est quasdam res quas ex communi.
  </div>
</div>

<!-- Inline level -->
<span class="d-inline-block text-truncate" style="max-width: 150px;">
  Praeterea iter est quasdam res quas ex communi.
</span>
```

Text transform

Transform text in components with text capitalization classes.

lowercased text.

UPPERCASED TEXT.

CapiTaliZed Text.

```
<p class="text-lowercase">Lowercased text.</p>
<p class="text-uppercase">Uppercased text.</p>
<p class="text-capitalize">CapiTaliZed text.</p>
```
Copy

Note how `text-capitalize` only changes the first letter of each word, leaving the case of any other letters unaffected.

Font weight and italics

Quickly change the weight (boldness) of text or italicize text.

Bold text.

Normal weight text.

Light weight text.

Italic text.

Copy

```html
<p class="font-weight-bold">Bold text.</p>
<p class="font-weight-normal">Normal weight text.</p>
<p class="font-weight-light">Light weight text.</p>
<p class="font-italic">Italic text.</p>
```
