Visibility

Visibility

Control the visibility, without modifying the display, of elements with visibility utilities.
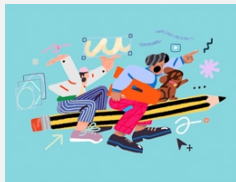

Set the `visibility` of elements with our visibility utilities. These do not modify the `display` value at all and are helpful for hiding content from most users, but still keeping them for screen readers.

Apply `.visible` or `.invisible` as needed.

Copy

```
<div class="visible">...</div>
<div class="invisible">...</div>
```

Copy

```
// Class
.visible {
```

```scss
    visibility: visible;
}
.invisible {
  visibility: hidden;
}

// Usage as a mixin
.element {
  @include invisible(visible);
}
.element {
  @include invisible(hidden);
}
```
